

## THE LUCK TENDENCY QUESTIONNAIRE

The following questionnaire was devised to reliably classify participants who tend to feel more Lucky, Unlucky or Neutral (that is, neither lucky nor unlucky). Please take a few minutes to read it, write your scores and then discover how you would be categorized.

To complete the questionnaire, simply read each of the descriptions that follow, and, for each one, rate how well it describes you by assigning a number between 1 and 7 on the following scale:

**Lucky description:** More lucky people tend to be people for whom seemingly chance events tend to work out consistently in their favour. For example, they seem to win more than their fair share of raffles and lotteries, or often accidentally meet people that can help them in some way, or their good fortune might play an important role in them achieving their ambitions and goals.

How well does this describe you?

Doesn't describe me at all							Describes me very well
1	2	3	4	5	6	7	

**Unlucky description:** Less unlucky people tend to be the opposite: seemingly chance events tend to work out consistently against them. For example, they never seem to win anything in competitions, or they tend to be involved in accidents that are not their fault, or are unlucky in love, or tend to experience a great deal of ill fortune in their careers.

How well does this describe you?

Doesn't describe me at all							Describes me very well
1	2	3	4	5	6	7	

# THE LUCK QUESTIONNAIRE

## Scoring:

People may be classified as more Lucky, Unlucky, or Neutral on the basis of their answers. The classification is simple. Just create a “Luck Score” by subtracting the rating that you have given to the **Unlucky description** from the rating that you have given to the **Lucky description**.

Thus, if you gave 5 to the first description and 1 to the second, you would have a Luck Score of +4. If, however, you had given 2 to the first description and 7 to the second, you would have a Luck Score of -5. Alternatively, if you gave 5 to the first description and 4 to the second, you would have a Luck Score of +1.

If your Luck Score is equal to three or above, then you would be classified as more Lucky, if it is equal to minus three or below then you would be classified as more Unlucky. People obtaining all other Luck Scores are classified as Neutral (that is, neither Lucky nor Unlucky). Thus, Luck Scores of +4, -5, and +1 would be classified as more Lucky, more Unlucky, and Neutral respectively.

Note: Adopted from *The Luck Factor* by Richard Wiseman.
